

Renderer

Renderer

ObjectHorizontalRenderer

```
classDiagram
    class Renderer1[Renderer]
    class Renderer2[Renderer]
    class ObjectHorizontalRenderer
    ObjectHorizontalRenderer --|> Renderer1
    ObjectHorizontalRenderer --|> Renderer2
```

The diagram illustrates a class hierarchy where a base class, ObjectHorizontalRenderer, is inherited by two subclasses, both named Renderer. The base class is positioned at the bottom, and the two subclasses are positioned at the top. A horizontal line connects the two subclasses, and a vertical line descends from its center to the base class, with arrows pointing upwards to indicate the direction of inheritance.
