Renderer

ObjectHorizontalRenderer

```
classDiagram
    class Renderer1[Renderer]
    class Renderer2[Renderer]
    class ObjectHorizontalRenderer
    ObjectHorizontalRenderer --|> Renderer1
    ObjectHorizontalRenderer --|> Renderer2
```

The diagram illustrates a class hierarchy where 'ObjectHorizontalRenderer' is the base class, and two 'Renderer' classes are its subclasses. The 'ObjectHorizontalRenderer' box is positioned at the bottom center, with two vertical lines extending upwards from its top edge. These lines connect to a horizontal line that spans the width between the two 'Renderer' boxes. From the ends of this horizontal line, two vertical lines extend upwards, each terminating in an arrowhead pointing to the bottom edge of a 'Renderer' box. The 'Renderer' boxes are located at the top left and top right of the diagram.
